

# Apptack Doc For Server Push pull

## Setp 1 Open Terminal

## Setp 2 Go to Directory

```
cd sites/hrtap2/
```

## Step 3 check branch. Its must be a mike

```
a. git branch
   master
   * mike    (* indicate our current branch)
```

If \* not apper with mike then please switch branch For switch branch  
git checkout mike

again check \* is apper with phase2 or not. If apper then go to next step  
otherwise do again and check

## Step 4 Check changes

```
git status

if anychanges apper then commit all using
git add .
git commit -m 'your message'
```

## Step 5 Pull code from origin

```
git pull origin mike
```

if any conflict apper then resolve and commit

## Step 6 Push your local changes in git

```
git push origin mike
```

## Step 7 push on heroku

```
git push heroku mike:master
```

## Step 8 Its optional if you add any migration then follow this step else skip

```
heroku run rake db:migrate
```

Now check on heroku <https://hrtap2.herokuapp.com/>
